1 theme and focus few books are available to integrate the models for facilities siting transportation and land use employing state of the art quantitative models and case studies this book would guide the siting of such facilities as transportation terminals warehouses nuclear power plants military bases landfills emergency shelters state parks and industrial plants the book also shows the use of statistical tools for forecasting and analyzing implications of land use decisions the idea is that la use on a map is necessarily a consequence of individual and often conflicting siting decisions over time since facilities often develop to form a community these decisions are interrelated spatially i e they need to be accessible to one another via the transportation system it is our thesis that a common methodological procedure exists to analyze all these spatial temporal constructs while there are several monographs and texts on subjects related to this book s this volume is unique in that it integrates existing practical and theoretical works on facility location transportation and land use instead of dealing with individual facility location transportation or the resulting land use pattern individually it provides the underlying principles that are behind these types of models particularly of interest is the emphasis on counter intuitive decisions that often escape our minds unless deliberate steps of analysis are taken oriented toward the fundamental principles of infrastructure management the book transcends the traditional engineering and planning disciplines where the main concerns are often exclusively either physical design fiscal socioeconomic or political considerations

location analysis has matured from an area of theoretical inquiry that was designed to explain observed phenomena to a vibrant field which can be and has been used to locate items as diverse as landfills fast food outlets gas stations as well as politicians and products in issue and feature spaces modern location science is dealt with by a diverse group of researchers and practitioners in geography economics operations research industrial engineering and computer science given the tremendous advances location science has seen from its humble beginnings it is time to look back the contributions in this volume were written by eminent experts in the field each surveying the original contributions that created the field and then providing an up to date review of the latest contributions specific areas that are covered in this volume include the three main fields of inquiry minisum and minimax problems and covering models nonstandard location models including those with competitive components models that locate undesirable facilities models with probabilistic features and problems that allow interactions between facilities descriptions and detailed examinations of exact techniques including the famed weiszfeld method and heuristic methods ranging from lagrangean techniques to greedy algorithms a look at the spheres of influence that the facilities generate and that attract customers to them a topic crucial in planning retail facilities the theory of central places which other than in mathematical games where location science was born
