a technique of defining an accurate performance model of an airplane from limited flight test data and predicted aerodynamic and propulsion system characteristics is developed with the modeling technique flight test data from level accelerations are used to define a 1g performance model for the entire flight envelope of an f 104g airplane the performance model is defined in terms of the thrust and drag of the airplane and can be varied with changes in ambient temperature or airplane weight the model predicts the performance of the airplane within 5 percent of the measured flight test data the modeling technique could substantially reduce the time required for performance flight testing and produce a clear definition of the thrust and drag characteristics of an airplane
